Hydrogen Energy Storage: Experimental analysis and modeling

FCTO Webinar

Josh Eichman, PhD

8/19/2014

Motivation for hydrogen energy storage

- **Drivers**
 - More renewables bring more grid operation challenges
 - Environmental regulations and mandates
- **Hydrogen can be made “dispatch-ably” and “renewably”**
- **Hydrogen storage can enable multi-sector interactions with potential to reduce criteria pollutants and GHGs**

Source: GE Energy Consulting (2010). Integration of Renewable Resources: Operational Requirements and Generation Fleet Capability at 20% RPS, CAISO, PNNL, PLEXOS, Nextant.

Source: NREL 00560.

Spoiler Alert

Show that hydrogen technologies...

1. Can be operated flexibly and in a variety of configurations
2. Can enable interactions between multiple sectors
 - Electric, transport, heating fuel and industrial supply
3. Can participate in electricity markets which improves competitiveness and further enables renewables

Outline

- **Hydrogen System Configurations**
- **Grid Operation Requirements**
- **Experimental flexibility tests**
- **Modeling methodology and results**
 - Techno-economic comparison
 - Energy capacity sensitivity analysis
 - Impacts from increased renewables (backup slides)
 - Impacts on larger grid system (backup slides)
- **Recent hydrogen energy storage Workshop**
- **Conclusions**

Hydrogen System Configurations

Hydrogen storage and Power-to-gas (PtG) projects

- **Hydrogen Projects: 41 realized and 7 planned as of 2012**

- Germany (7) (5 planned)
- USA (6)
- Canada (5)
- Spain (4)
- United Kingdom (4) (1 planned)
- etc.

- Sewage Gas or Biomass to Hydrogen
- Future Power to Gas projects

Grid Operation Requirements

- Electricity demand must closely balance production

Grid Operation Requirements

- **Ancillary Services**

- Load Following
- Regulation (freq response)
- Spinning Reserve
- Non-Spinning Reserve
- Other Reserves
- Voltage Support
- Black Start

Example: 2,600 MW are dropped at 6:11 PM

Source: Kirby,
ORNL/TM-2006/565

Capacity Markets

- **Sufficient capacity must be acquired**
 - Capacity markets are used to achieve resource adequacy targets
 - Ensures new generation is built (i.e., long-term)
 - Ensures installed generators make sufficient money to pay for capital costs.
- **Cost of New Entry (CONE)**
 - Equivalent to purchasing a new combustion turbine
 - Assume \$150/kW-year

Source: Pfeifenberger, J.P.; Spees, K.; Newell, S.A. 2012. Resource Adequacy in California. The Brattle Group

Grid Operation Requirements

- **Market value varies for services provided**

- **Energy**

- Electric Price

- **Ancillary Services**

- Load-Following Up/Down
- Regulation Up/Down
- Spinning Reserve
- Non-Spin Reserve
- Voltage Support
- Black Start

- **Capacity**

- \$150/kW-year

California Historical Market Clearing Prices (CAISO 2012)

Resource Adequacy in California. The Brattle Group

Wind to Hydrogen Project

- Flexibility testing is performed at the National Wind Technology Center

Xcel Energy and NREL's Integrated Renewable Hydrogen System

- Renewable Integration
- Responsive loads (demand response)
- Energy Storage
- Multiple outputs streams
 - Electricity
 - Transport fuel
 - Industrial gas

March 2011

Electrolyzer Flexibility Tests

- **Testing explored several parameters**

- Startup and Shutdown
- Ramp Rate
- Minimum Turndown
- Frequency Response
- Response Time

	PEM	Alkaline
Manufacturer	Proton OnSite	Teledyne Technologies
Electrical Power	40kW (480VAC)	40kW (480VAC)
Rated Current	155A per stack	220A 75 cell stack
Stack Count	3	1
Hydrogen Production	13 kg/day	13 kg/day
System Efficiency at Rated Current	75.6 (kWh/kg)	95.7 (kWh/kg)

Source: Eichman, J.D.; Harrison, K.; Peters, M. (Forthcoming).
Novel Electrolyzer Applications. NREL/TP-5400-61758

Electrolyzer Response Time

- Power set-point was changed (PEM unit shown below)
 - Ramp Up: 25%, 50%, and 75% → 100%
 - Ramp Down: 100% → 75%, 50% and 25%

**Electrolyzers can rapidly change their load point
in response to grid needs**

Electrolyzer Frequency Regulation Tests

- Tested frequency response using a microgrid

Source: Harrison K., Mann M., Terlip D., and Peters M., NREL/FS-5600-54658

Electrolyzers can accelerate frequency recovery

Electrolyzer Testing Results vs. Requirements

- Grid Service Requirements

Source: Kirby, B.J. 2006. Demand Response for Power Systems Reliability: FAQ. ORNL

Source: Eichman, J.D.; Harrison, K.; Peters, M. (Forthcoming). Novel Electrolyzer Applications. NREL/TP-5400-61758

Electrolyzers can respond fast enough and for sufficient duration to participate in electricity markets

Capacity req. for grid services is reducing

- **Minimum capacity requirements to bid into market**
 - 50 MW for E.ON as of 2006 [2]
 - 30 MW for EnBW, RWE, and VET for minute reserve power in Germany as of 2006 [2]
 - 10 MW for ISO-NE and the primary and secondary control markets in Germany [2, 4]
 - 1 MW for NYISO, PJM and CAISO [3, 4]
 - 100 kW load reduction in the case of NYISO curtailment program [1]
- **Capacity can often be aggregated**

Grid capacity requirements are approaching electrolyzer manufacturer scale-up targets

Modeling Approach

- **Modeling Strategies**

- Price-taker
- Production Cost
- Hybrid

**Can perform time-resolved
co-optimization of energy and
ancillary service products very quickly**

Historical or Modelled

- Energy Prices
- Reserve Prices
- Hydrogen Price
- Operational parameters

Price-Taker

Profit based on operation
(arbitrage, AS, H₂ sale, etc.)

Assumes

- 1.) Sufficient capacity is available in all markets
- 2.) Objects don't impact market outcome (i.e., small compared to market size)

Modeling Approach: Production Cost Model

- Transmission Network (electric and gas)
- Generator properties (coal, gas, nuclear, renewable, etc.)
- Load requirements
- Reliability requirements
- Other System Constraints

For more details see Backup slides or Eichman J., 2014 DOE Annual Merit Review Presentation

Production Cost Model

- Generator operation (starts, fuel, costs)
- Fuel use and cost
- Emissions
- Transmission operation (flow, congestion)
- Imports & Exports
- Load served
- Energy Prices
- Reserve Prices

California Power Plants and Transmission Lines (energyalmanac.ca.gov/)

Performs co-optimization of energy and ancillary service products to minimize system production cost (days or weeks of runtime)

Modeling Approach: Hybrid

- Transmission Network (electric and gas)
- Generator properties (coal, gas, nuclear, renewable, etc.)
- Load requirements
- Reliability requirements
- Other System Constraints

For more details see Backup slides or Eichman J., 2014 DOE Annual Merit Review Presentation

Production Cost Model

- Energy Prices
- Reserve Prices
- Hydrogen Price
- Operational parameters

- Generator operation (starts, fuel, costs)
- Fuel use and cost
- Emissions
- Transmission operation (flow, congestion)
- Imports & Exports
- Load served

Models can be integrated (e.g., effect of renewables, changes to gas system, market design)

Price-Taker

Profit based on operation (arbitrage, AS, H₂ sale, etc.)

Approach – Assumptions for Price-taker

Properties	Pumped Hydro	Pb Acid Battery	Stationary Fuel Cell	Electrolyzer	Steam Methane Reformer
Rated Power Capacity (MW)	1.0	1.0	1.0	1.0	500 kg/day
Energy Capacity (hours)	8	4	8	8	8
Capital Cost (\$/kW)	1500 ¹ - 2347 ²	2000 ¹ - 4600 ¹	1500 ³ - 5918 ²	430 ³ - 2121 ⁶	427 – 569 \$/kg/day ⁴
Fixed O&M (\$/kW-year)	8 ¹ - 14.27 ²	25 ¹ - 50 ¹	350 ²	42 ⁴	4.07 – 4.50 % of Capital ⁴
Hydrogen Storage Cost (\$/kg)	-	-	623 ⁵	623 ⁵	623 ⁵
Installation cost multiplier	1.2 ⁴	1.2 ⁴	1.2 ⁴	1.2 ⁴	1.92 ⁴
Lifetime (years)	30	12 ¹ (4400hrs)	20	20 ⁴	20 ⁴
Interest rate on debt	7%	7%	7%	7%	7%
Efficiency	80% AC/AC ¹	90% AC/AC ¹	40% LHV	70% LHV	0.156 MMBTU/kg ⁴ 0.6 kWh/kg ⁴
Minimum Part-load	30% ⁷	1%	10%	10%	100%

FC	Fuel Cell
EY	Electrolyzer
SMR	Steam Methane Reformer

Name	Services
All	All Ancillary Services
Eonly	Energy Arbitrage only
Baseload	"Flat" operation

Price-Taker Results with historical prices

Selling hydrogen increases competitiveness

Providing ancillary services > Energy only > Baseload

Electrolyzer providing demand response is promising

Blue bars represent a range of potential prices at which hydrogen can be sold (\$3-10/kg)
Assumed value of grid services and hydrogen, less feedstock costs received by FC, EY or SMR

Name	Technology
HYPS	Pumped Hydro
Batt	Battery
FC	Fuel Cell
EY	Electrolyzer
SMR	Steam Methane Reformer

Name	Services
All	All Ancillary Services
Only	Energy Arbitrage only
Baseload	"Flat" operation

Energy Capacity Sensitivity Analysis

- FC-EY storage device with varying energy capacity

More storage is not necessarily more competitive in current energy and ancillary service markets

Hydrogen Energy Storage Workshop

Goal: Identify challenges, benefits and opportunities for commercial hydrogen energy storage applications to support grid services, variable electricity generation, and hydrogen vehicles

Scope: Convened by U.S. DOE and Industry Canada to explore a broad range of services from Hydrogen storage systems in the near and long term

Focus: Four key topics:

- Lessons Learned and Demonstration Status
- Market Opportunities and Business Models
- Technology R&D and Near-Term Market Potential
- Policy and Regulatory Challenges and Opportunities

MAY 14-15TH, SACRAMENTO, CA

Workshop Participants

- 65 participants with a significant diversity of stakeholder types and a focus on policy expertise

California State Government

Agencies

CPUC: California Public Utilities Commission

SCAQMD: South Coast Air Quality Management District

CEC: California Energy Commission

CARB: California Air Resources Board

GO: Governor's Office

Preliminary Workshop Findings

- **Example Findings**
 - Criteria and Barriers
 - Technical and Economic Viability
 - Multiple end uses
 - Policy
 - Equal treatment and credit in markets
 - Next Steps
 - Demonstration and pilot projects

Source: Melaina, M., J. Eichman, (In Review). "Hydrogen Energy Storage: Grid and Transportation Services". NREL/TP-5400-62518

Analysis Conclusions

Flexibility

1. **Electrolyzers can respond sufficiently fast and for a long enough duration to participate in electricity markets.**

Economic Viability

1. **Sell Hydrogen: Systems providing strictly storage are less competitive than systems that sell hydrogen**
2. **Revenue w/ ancillary service > energy only > baseload**
3. **Electrolyzers operating as a “demand response” devices have very favorable prospects**
4. **More storage is not necessarily more competitive in current energy and ancillary service markets**

Questions?

Backup Slides

Hybrid model results with high renewables

More Renewables yields greater value for hydrogen equipment

- Projected renewable capacity in California in 2022 increased by 2x, 3x, 4x and 5x

Name	Technology
HYPS	Pumped Hydro
Batt	Battery
FC	Fuel Cell
EY	Electrolyzer
SMR	Steam Methane Reformer

Name	Services
All	All Ancillary Services
Eonly	Energy Arbitrage only
Baseload	"Flat" operation

Production Cost Results for Electrolyzer acting as a demand response device

- Integrating H₂ devices into a large-scale grid simulation tool shows how the grid will be affected
 - Emissions
 - Generation mixture
 - Production cost
 - Prices

High value of H₂ makes it more valuable than elec. (incl. arbitrage and ancillary services)

Comparison to H2A

Integration with the grid can lower feedstock costs
and increase revenue

• H2A Current Central Hydrogen Production

Name	Technology
HYPS	Pumped Hydro
Batt	Battery
FC	Fuel Cell
EY	Electrolyzer
SMR	Steam Methane Reformer

Name	Services
All	All Ancillary Services
Eonly	Energy Arbitrage only
Baseload	"Flat" operation

NREL and West Texas A&M University

Project to show how hydrogen technologies can be used to support grid operation and when high renewable penetrations require long-term storage
